

*The current owner of the San Ramon golf course, a Beverly Hills development company, purchased the property at the end of last year for a price that was \$4 million above the seller's asking price. They have a documented history of buying golf courses, then closing them and allowing them to deteriorate. They do this in order to force the local planning commissions and city councils to rezone and allow them to build homes on the open space.*

*The new owner already closed the pool in May two days before the start of the Aqua Bears swimming season. A program that has supported our children for decades. It is reported that plans are to shut down the golf course by year end.*

*By staying aware and united as a community, we can stop this attempt to devalue our neighborhoods and personal property for their personal financial gain.*
